Harnessing Culture Collections for Improved Plant Health
Sunday, 20 August 08:30 to 12:00

The National Collection of Plant Pathogenic Bacteria – Standards for Housing and Reference

Andrew Aspin, NCPPB, UK

Meaningful standards can be difficult to write due to the diverse nature of the collections for which they are intended. As such, useful guidelines and standards are limited, however there are some very helpful guidelines and standards that have been published. The talk highlights some examples of these useful standards and why they are needed.

The NCPPB is a long-established collection that uses published guidelines and has helped in producing standards.
